

## FARRINGTON STATION ROOFLIGHTS LONDON

The redevelopment of Farringdon station was part of the ThamesLink programme. The Bourne Group delivered the station's new integrated ticket hall which included the off-site assembly of 8Nr. new rooflights.

The structural steel frames were specifically designed to ensure that the cladding, louvres and large glazed panels could be pre-installed off-site, while ensuring that the modules could be transported to London and lifted without being damaged. All of the rooflights were lifted and installed over a three night period, saving over sixteen weeks on the site programme.

The structural steel package delivered to Farringdon earned the Bourne Group the 2012 Construction News Steel Specialist Award. The project was also shortlisted at the 2012 Structural Steel Design Awards.
